

Vitaspan Partners With SIP Medical Family Office to Bring Structured Longitudinal Health Records to International Private Clients

iPMI Global | InsureTech News | Friday, 05 June 2026

Vitaspan, the preventative healthcare infrastructure company building structured, sovereign, patient-controlled longitudinal health records, today announced a strategic commercial partnership with **SIP Medical Family Office**, the international health management and private medical insurance advisory firm serving international high-net-worth and ultra-high-net-worth individuals and families.

The partnership establishes a commercial framework for SIP Medical Family Office to introduce and deploy the Vitaspan platform within its client services model, beginning with international private clients whose healthcare is often delivered across multiple providers, jurisdictions, specialists, laboratories and insurers.

For internationally mobile families, medical information is frequently fragmented across systems and geographies. Vitaspan's platform consolidates those records into a structured, sovereign and permissioned longitudinal health record, supporting continuity of care, preventative health management and coordinated access between clinicians, specialists and healthcare providers.

The partnership marks an important milestone in Vitaspan's commercial expansion into the international concierge, preventative and premium healthcare sectors.

Mark Jackson, Founder and CEO of Vitaspan

Our healthcare systems generate enormous amounts of data, but too little of it exists in a structured, longitudinal format that is usable for individuals and clinicians. SIP Medical Family Office understands the needs of internationally mobile clients who require continuity, confidentiality, accessibility and trusted coordination across their health journey. This partnership reflects a shared view that preventative healthcare requires infrastructure built around the individual, not fragmented institutions.

Kevin Bürchler, CEO of SIP Medical Family Office

Our clients operate across multiple healthcare systems, jurisdictions and specialists. The ability to provide a trusted, structured and portable longitudinal health record is critically important. Vitaspan's infrastructure is a gamechanger to achieve better health outcomes for private clients and patients.

Vitaspan is designed as an infrastructure layer rather than a replacement for existing clinical systems. The platform enables individuals to securely aggregate medical records across healthcare providers, laboratories, imaging centres, wearable devices and other health systems into a single permissioned record, with governance, auditability and consent controls embedded into the platform.

The agreement also creates a framework for future collaboration across preventative healthcare services, health optimisation programmes and personalised care pathways for SIP Medical Family Office clients.

SIP Medical Family Office supports international clients seeking the best and highly personalised access to healthcare, preventative medicine, longevity programmes, and international care coordination through a curated global network of doctors and hospitals.

The partnership follows continued development of Vitaspan's secure, permissioned health data infrastructure platform and growing commercial engagement with private clinics, insurers and preventative healthcare providers across the UK and Europe.

About Vitaspan

Vitaspan is building the infrastructure layer for preventative healthcare, beginning with private healthcare providers, concierge medicine, longevity clinics and premium care networks. The platform transforms fragmented medical records into structured longitudinal health records designed to support secure, permissioned and clinically usable healthcare data across providers, clinicians, insurers and digital health ecosystems. **www.vitaspan.ai**
